

Directions for Applying your Die Cut Vinyl Decal:

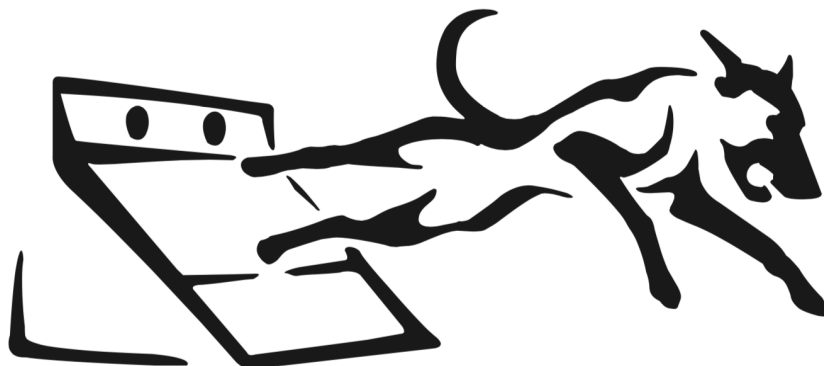

With the design face down, rub the grid side of the paper firmly on a flat surface with a credit card or something similar with a hard flat edge, insuring the design sticks firmly to the opposite paper layer.

Carefully and slowly peel away the grid side of the paper from the design. If the decal sticks to the grid side, repeat rubbing and very slowly pull away again.

Now you're ready to apply the decal to a clean dry surface such as your car window.

Very carefully position the decal where you want it and apply it in a rolling motion from left to right. Once applied to the window, rub the paper firmly with the credit card so the decal adheres to the window. Carefully remove the paper and enjoy!
